10

11

12   A   method   of   tracking   participants'   behavior   in   a

13   computerized   dating   or   matchmaking   service   to   determine

14   selection preferences that are utilized to rank matches with

15   other   participants   based   on   level   of   compatibility,

16   comprising;   creating   personal   profiles   by   a   first   and   a

17   second   participant;   selecting   or   rejecting   the   second

18   participant for communication by the first participant; and

19   calculating   a   compatibility   score   between   the   first

20   participant and the second participant and/or a plurality of

21   other   participant's   by   comparing   the   first   participants'

22   statistics   as   determined   by   choices   made   by   the   first

23   participant with the second participant and/or the plurality

24   of other participants.
